The MILOS LED Trailer

The LED Trailer is a high-performance, portable display solution developed for maximum visibility and safety. Designed for easy transport and set-up, it features a powerful LED screen mounted on a robust trailer structure, making it ideal for outdoor events with large crowds. The LED Trailer ensures a reliable, energy-efficient display while prioritising safety with stable operation and secure set-up, providing both durability and ease of use.

Screen

- **Size:** The screen measures 5.0x3.0 metres, offering a large display area for impactful visuals.
- **Height-adjustable:** Features a motorised lifting system that allows adjustment up to a maximum height of 6.3 m. The hydraulic system offers automatic locking in any position.
- **Rotating screen:** The screen can be rotated 340° around its vertical axis, ensuring optimum visibility and adaptability to challenging site conditions.

Simplified set-up and transport

- **User-friendly operation:** A portable control panel, operable wirelessly or via cable, makes screen unfolding and folding safe and efficient. The entire process can be managed by a single person.
- **Compact design:** The trailer's aerodynamic, compact folded shape ensures a low height of just 1.6 m, contributing to stability during transport.
- **Quick set-up:** The straightforward design minimises preparation time (up to 10 minutes), making it ideal for rapid deployments.

Wind resistance

- **Proven strength:** The MILOS LED Trailer is EN 13814-compliant to withstand winds up to 72 km/h (Beaufort 8).

Safety

- **Braking system:** The MILOS LED Trailer is automatically braked by SITEMA in any position.
- **Emergency protocol:** An emergency hydraulic circuit enables the system to be folded in the event of power failures, thereby, minimising risks.
- **Enhanced safety standards:** Certified for public events, the LED Trailer meets stringent safety requirements.
